Summary

Platform engineer who makes data-intensive services dependable in production. Seven years of experience designing observable APIs, delivery pipelines, and developer tooling for teams that value clear interfaces and short feedback loops. Comfortable moving between architecture, implementation, and support.

Experience

Northline Systems

Platform Engineer

2021–Present

Manchester, UK

- Designed a typed event-ingestion service used by five product teams; reduced failed deliveries by 42% through idempotency and replay tooling.
- Reworked CI and release checks so every production change reports its test, migration, and rollback evidence in one place.

Civic Data Works

Software Engineer

2017–2021

Leeds, UK

- Built Python and PostgreSQL services for public-data workflows, with documented schemas and automated contract tests.
- Led incident reviews and paired with analysts to turn recurring manual work into small, maintainable command-line tools.

Selected work

Relay

Maintainer

2024

Python, FastAPI, PostgreSQL

Open-source toolkit for validating incremental data imports and producing machine-readable failure reports.

Compass

Technical lead

2020

Docker, GitHub Actions, Linux

Internal deployment template that made health checks, logs, and ownership visible before a service reached production.

Technical skills

Languages: Python, SQL, Bash, TypeScript

Systems: PostgreSQL, Docker, Linux, REST, GitHub Actions

Practice: testing, observability, data modelling, technical writing

Education

Northern Institute of Technology

BSc Computer Science

2013–2017

Leeds, UK
